

YOUR REPORT

Now we know you'd rather be a Collateral Master – over a Collateral Manager. We're here to make collateral management work for you.

Cost

Your current situation

Internal systems and software tend to be expensive to build, maintain, upgrade and support. Protracted design cycles and laborious testing requirements drive up ongoing costs.

Your estimated cost savings would be up to

60%

Reduce Cost with CloudMargin

CloudMargin is a single-instance platform, built on microservices architecture – via the cloud. No installation is required, upgrades are seamless, and all maintenance and support is provided as part of the subscription fee – enabling firms to achieve substantial cost savings.

Risk

Your current situation

In-house builds face multiple security, risk and scalability issues. Ongoing upgrades and maintenance release cycles invite risk whilst security and scalability are managed by internal teams with limited resources.

Your current estimated risk profile

High

Reduce Risk with CloudMargin

CloudMargin is hosted on AWS's public cloud – used by the largest firms in the industry for its robust, fully automated workflow and integrations to key infrastructure. Not only the most cost effective method, but it also ensures a higher level of security. With the latest technology and the best security measures, updates are made with all users in mind.

Efficiency

Your current situation

Product class margining (OTC/Cleared/ETD/Repo) tends to be bifurcated, with corresponding processes and reporting disjointed. Collateral allocation and funding processes are often suboptimal – whilst significant IT and ops resources have to be allocated to maintenance, upgrades and testing.

Your estimated increase in efficiency

50%

Increase collateral efficiency with CloudMargin

CloudMargin gives you the ability to work from one global platform across multiple locations and to have a single workflow and centralised view across all products. STP and optimisation preferences can be set by product and agreement and applied across collateral pools, whilst a real-time reporting tool and real-time settlement dashboard give you full transparency.
