CLOUDMARGIN

YOUR REPORT

Now we know you'd rather be a Collateral Master
– over a Collateral Manager. We're here to make collateral
management work for you.

Cost

Your current situation

Outsourcing enables firms to remove the process from their work, allowing them to deploy fewer resources to focus on the exceptions an outsourcer provides. Unfortunately, this comes at a significant cost.

Your estimated cost savings would be up to

70%

>

Reduce Cost
with CloudMargin

CloudMargin is a single-instance platform deployed on the cloud. Hosting cost efficiencies, and a focus on the maintenance and improvement of a single instance of the service, result in current and future cost efficiencies that no other vendor can offer. We pass these savings on to our clients so they can reduce costs.

Risk

Your current situation

Outsourcing can significantly increase operational risk for firms. Many outsourcing providers rely on legacy technology, inviting delivery risk, whilst a lack of STP can invite processing risk and potential for human error and mismanagement.

Your current estimated risk profile

High

>

Reduce Risk
with CloudMargin

With CloudMargin, you have full control of the process, rules and tolerances you set for automation, and complete transparency of process and exceptions, allowing a significant reduction in operational risk. AWS-deployed, modern microservices technology significantly reduces service delivery risk.

Efficiency

Your current situation

An inefficient back and forth means the exceptions an outsourcer provides can be difficult and slow to resolve. Many servicers provide limited reporting offerings so transparency is hard to obtain, and a lack of automation can result in late-in-the-day funding certainty.

Your estimated increase in efficiency

25%

>

Increase collateral efficiency with CloudMargin

A fully automated margin call workflow utilising our embedded AcadiaSoft MarginManager connectivity allows you to set rules and tolerances so movements are agreed automatically first thing in the morning, according to the optimisation profile you set. Full transparency is provided by an exceptions management workflow, a flexible reporting suite and a real-time settlement dashboard.
